

DASHBOARDS AND CROSS-FOLDER REPORTING FOR SAGE TRADE SPECIALTY CONTRACTOR

Eliminate Spreadsheets

Overview

Anterra has integrated their financial and construction business intelligence software with Sage Trade Specialty Contractor! Our cloud based solution gives you pre-built financial and construction dashboards, scorecards and analysis grids that let you report across folders and drill to transactions instantly. We help you align your team to the right metrics to proactively manage your business.

Anterra also eliminates many manually prepared spreadsheets and gives you the reporting you have always wanted. You can access our reports from any computer or iPad from any location.

“Anterra has given us accurate, timely and relevant reports that our staff can access anywhere. Our business has become more efficient and focused with reports that align everyone to the right metrics.”
Harley Garrison, COO
Starr Electric

Cross folder drill-through Consolidations

Our Financial BI module has pre-built drill through financial statements. Report across all of your companies and data folders and drill through to transaction details from anywhere. We also provide many graphs including financial ratio trends, net income to budget trends and operating expense analysis.

Here’s an example of our financial ratio scorecard - you can drill through each ratio to transactions to see why a ratio is trending a certain way.

Anterra is the 2013 Sage Development Partner of the Year!

“Anterra has taken reporting and analytics to a new level for the construction industry”
Dennis Stejskal, VP Sage Software

“Key report preparation time went from HOURS TO SECONDS.”

Construction Dashboards

Anterra’s pre-built construction dashboards keep you in front of job issues and align your team to the right key performance indicators. We give you extensive analysis of

1. Margin erosion over time
2. Costs and forecasts
3. Work backlog
4. Profitability by division, project manager, job type or any job attribute you track

The Results

Anterra’s implementation of the multi-location major electrical contractor Starr Electric resulted in the elimination of many manual reports and processes, cross folder financial and construction reporting and rapid deployment of new reporting capabilities without an investment in servers or additional IT management workload.
